AmanoNet Software

Challenge

The Amano system offered the flexibility, durability and aesthetic appeal required for a town that prides itself on maintaining classic New England character. The town had dozens of access groups, each with its unique requirements. A seamless interface with the current alarm and fire department systems was needed as was elevator control. Special attention had to be paid to accommodate the needs of the disabled and elderly in public spaces.

Solution

Amano implemented a complete system providing the right answer to the challenges ahead. The system design lends itself to easy deployment, rapid expansion, and low maintenance. The commitment that Amano has towards its customers acts as another layer of security for the town. The system is now an integral part of the town infrastructure and is noticed by general public. The Amano card readers installed are designed with aesthetics and reliability in mind, and stand high above generic looking plastic types.

An Amano 400i 64 door TCP/IP controller was installed in each building, if those controllers ever reach capacity, additional controllers can be added. Metal keypad and non-keypad card readers were installed throughout. No network converters are needed as the controller communicates in native TCP/IP. There are also no limits on clients that the town can deploy, as additional departments come online, they can be added into the system.

Results

The town has now a fully networked AmanoNet system across a Wide Area Network. The Fire stations, Police station, and City hall all work seamlessly and in synchronicity. The system controls and manages access privileges for all town employees and also automates door routines for scheduled meetings. Users of the system can all manage their divisions with full accuracy and transparency. The Amano card readers' revolutionary metal housing can withstand the harshest weather and vandalism while maintaining their aesthetic appeal. Finally the system installed can easily support the Amano Time and Attendance module when needed.
